

Nightclub Design- Callin Fortis

The Miami-based designer is responsible for envisioning some of the most famous nightclubs in the world, developing an empire based on offering people a good time. His award-winning concepts have earned him the reputation of being one

of the most significant nightclub designers in history and it's no coincidence why - his resume is impressive to say the least. His chain of crobar nightclubs around the world and the legendary Rain Nightclub in South Beach are among his most notable and breathtaking concepts. He is also the recipient of the 2008 Best Nightclub Design Renovation award for his work on the magnificent Cameo Theatre in Miami.

The nightlife business has been good to Callin Fortis. Very good.

His ability to create a social environment that reflects the way people move and interact naturally is a testament to his keen observation of human nature. Club designers worldwide have learned from his ability to craft open spaces into social hubs that blend beauty with cutting-edge technology. Something Fortis is not often recognized for is the impact his concepts have had on other designers, forever changing club culture as we know it. Callin Fortis has set the standard for world-class nightclubs.

After designing nightclubs for over 20 years, Callin Fortis's nightclub design company is taking it to the next level with his appropriately-named Bigtime Design founded in 1999. He now has an entire team backing him, as Fortis is applying his visions of architecture, fashion, art and music to bigger and better projects including the recently completed Mondrain Hotel on South Beach and a recreation of the legendary Gatecrasher One nightclub which caught fire in June 2007.
